Re: Fuel Filter 56078

Applications: 2001-2005 Chrysler Dodge Mini Vans 2.4L, 3.3L and 3.8L

All blue retainer clips (2.50mm gap) found on the fuel filter pictured below, must be replaced with the white/yellow version (3.05mm gap) shown.

The vehicle fuel lines are coated with Nygal (a thick black coating) and there may be installation problems if this coating on the quick connect ridge bead increases the thickness beyond the retainer clip gap. For this reason, the specifications for the retainer clip have been changed, increasing the gap to 3.05mm. This change will ensure a quick installation achieving the proper connection on both standard and Nygal coated fuel lines.
